SonicWALL Server Anti-Virus

Activating Your Server Anti-Virus Upgrade

To activate and download your Server Anti-Virus software, you must first register your activation key on the SonicWALL website at the SonicWALL registration site <http://www.mysonicwall.com.> Follow the instructions below to activate and download your Server Anti-Virus software.

1. Log into your user account, and select a SonicWALL appliance to activate Server Anti-Virus.

Note: If you have only one SonicWALL appliance, you can use *Quick Register* to activate your Server Anti-Virus Upgrade.

Configuration Tips

Upgrading with SuperDAT Files

After installing GroupShield or NetShield, go to <u>http://www.nai.com</u> and locate the Anti-Virus Updates link. Follow the link to the latest SuperDAT files. SuperDAT files contain (Engine + DAT) in the hyperlinked description. The SuperDat file needs to be downloaded and installed immediately after either the GroupShield or NetShield installation, and then updated regularly as new Anti-Virus engines are released. Check the website monthly for updates.

Updating DAT Files

You can configure the Autoupdate feature of GroupShield and NetShield to automatically download the latest DAT files daily (recommended). Alternatively, the DAT file should be manually downloaded daily/weekly from http://www.nai.com, and then installed onto the server(s) running GroupShield or NetShield. The DAT file contains the latest virus definition information. Always check that the latest DAT file version is running on your server(s) for maximum anti-virus protection.

Product Documentation

If the file names listed in the tables do not match the file names on the download site, download the latest Server Anti-Virus Upgrade manual at <u>http://www.sonicwall.com/products/documentation.html</u>.

The product documentation associated with GroupShield or NetShield is included in the zip file and you should refer to it for complete installation instructions and configuration information.
