# MS Standard Circular Connectors

DESIGNED  
TO  
MIL-C-5015

RUGGED \*\* VERSATILE \*\* WEATHERPROOF

**APPLICATIONS:** Wherever Electrical Connections are required,  
Aircraft, Military, Marine, Industrial, Power and  
Signal, Telecommunication and Commercial.  
Where environment is a problem.

- \* SHELL TYPES AND SIZES FOR EVERY APPLICATION
- \* CONTACT ARRANGEMENTS FROM 1 TO 48
- \* RATINGS UP TO 900V AC and 245 AMP
- \* INTERFACIAL INSULATOR SEALING PLUS INDIVIDUAL CONTACT BARRIERS FOR MOISTURE PROOF SEALING AND PROTECTION AGAINST CORONA AND FLASH-OVER
- \* POLYCHLOROPRENE INSULATORS RESISTANT TO MOST FUELS AND CHEMICALS
- \* "CRACK FREE" RESILIENT INSULATORS
- \* GROMMET SEALING OF TERMINATIONS COMPLETE ENVIRONMENT RESISTANT ASSEMBLY
- \* DIE CAST ALUMINIUM ALLOY SHELLS; NON REFLECTIVE FINISH OVER CADMIUM
- \* POSITIVE VIBRATION FREE COUPLING
- \* ROBUST CABLE CLAMPING
- \* CONTACTS PRECISION MACHINED FROM COPPER ALLOY-SILVER PLATED HIGH CONDUCTIVE FINISH
- \* CLOSED ENTRY SOCKET CONTACTS WITH POSITIVE SPRING CONTACT TO ELIMINATE "TIRED" CONDUCTIVITY
- \* SOLDER OR CRIMP CONTACT TERMINATIONS

#### **MS-E:**

The basic connector — proven, reliable, versatile, environmental.

#### **POTTING VERSIONS:**

For the difficult situations including space and environmental problems.

#### **SOLDER AND CRIMP CONTACT TERMINATIONS:**

For crimp contact detail, see page 17. Fast accurate and reliable, termination crimping saves time and money in production applications.

#### **HIGH VOLTAGE APPLICATIONS:**

For voltages up to 15,000V D.C.

#### **R.F.I. SHIELDING:**

The latest addition to this comprehensive series. Offers high efficiency in guarding against spurious RFI/EMI.

#### **MAINS POWER CONNECTORS:**

Environmental single and 3-phase connectors combining power and control circuits.

#### **BAYONET LOCK:**

For fast coupling and even better water proofing.

#### **PROTECTIVE DUST CAPS:**

Available for all types.

#### **HEAD OFFICE AND FACTORY**

**STC CANNON COMPONENTS PTY. LTD.**

248 Wickham Rd., Moorabbin, Vic. 3189

Phone: 95 1566

Telex: AA30877

## OTHER PRODUCTS

The complete range of "CANNON" connectors cover the full range of applications:—

#### Environment Resistant MS-E, MS-F and MS-R Connectors

MS-E, MS-F and MS-R connectors have resilient insulators and wire sealing grommets for extreme environmental conditions and high altitude sealing. MS-E's and MS-F's have a mechanical cable clamp; the MS-R has a shorter, lighter weight endbell without cable clamp, and an O ring to supplement the interfacial seal. Shells are aluminium alloy. Contacts are silver plated copper alloy. Available in solder and crimp termination.

#### Potting ER Connectors

These light weight potting connectors provide resistance to salt water, fuels, etc., and will withstand the effects of high vibration. 3100 and 3106 connectors with plastic potting cups and resilient inserts meet the requirements of MS3103 and MS25183. Contacts are silver plated copper or brass. ER insulators are resilient; shells are aluminium alloy.

#### Accessories

Accessories to fit MS connectors include protective caps, cable clamps, telescoping bushings, dust caps.

#### High Temperature Connectors

High temperature MIL-C-5015 type connectors are not covered in this catalogue. Write for the High Temp Catalogues describing the five series of connectors available for elevated temperatures from 257°F as high as 1300°F. In addition, some connectors are moisture and nuclear radiation-resistant.

#### High Performance Connectors.

The CV series of circular, environmental, high performance MIL-C-5015 type connectors per MIL-C-83723 are not covered in this catalogue. CV connectors are designed to operate in severe space and missile environments, and utilize crimp terminated contacts in the field-proven LITTLE CAESAR® rear release contact retention assembly. For more data write for the 83723 catalogue.

# General Information

## Shell Sizes and Contact Arrangements

Threaded coupling shell sizes are based on the diameter of the coupling threads in sixteenths of an inch; for example, size 22 shell has a coupling thread diameter of 22/16 inch, which equals 1-3/8". Note: bayonet coupling shell sizes are not directly related to coupling diameter. Due to nature of design, nut sizes are significantly larger. In the contact arrangement section, pages 5-9 the shell size and contact arrangement number are shown in combination, e.g. 10SL-4, 22-2, 24-10. The digits (10SL, 22 and 24) preceding the dash refer to the shell size. The digits (-4, -2, -10) following the dash are the contact arrangement numbers. ITT Cannon proprietary arrangements, which are not yet approved by MS, are separately identified, example, 24A24, 24 preceding the dash in 24A24 again refer to the shell size. A 24 is the contact arrangement number.

## Contacts

Generally the connectors described in this catalog are assembled with solder pot contacts. Crimp contacts, however, are available for connectors having resilient insulators.

Pin and socket contacts are machined from bar stock to assure precision operation. They are designed to resist severe vibration and repeated connection and disconnection. The average force to either engage or separate pin and socket contacts will not exceed the average values given in the latest revision of MIL-C-5015.

Force in lbs.	Contact Sizes				
	16	12	8	4	0
MAXIMUM	3.00	5.00	10.00	15.00	20.00
AVERAGE	2.10	3.50	7.00	10.50	14.00
MINIMUM	.25	.50	.75	1.00	2.00

The standard contact finish is silver plate. The closed-entry socket contact design, now an established MIL spec requirement, has been a standard for years at ITT Cannon Electric. The engaging spring on socket contacts assures positive electrical contact. All solder pots, except thermocouple are tinned.

## Thermocouple Contacts

Size 12 and 16 contacts, machined from matching thermocouple lead wire alloys, can be supplied in ITT Cannon connectors. These thermocouple contacts maintain continuity from thermal-sensor leads thru a bulkhead or other closures in temperature measuring applications.

These contacts for matching lead wires are detailed by the standards of the Instrument Society of America (I.S.A.):

I.S.A. Standards	Material
J and Y	Iron and constantan
K	Chromel and alumel
T	Copper and constantan

Since the thermocouple connector application determines the soldering methods and materials to be used, thermocouple contacts, identified by permanent markings, are normally supplied with untinned solder pots. Consult factory for part number information.

## Alternate Insert Positions

Alternate insert positions are available to prevent cross-plugging of adjacent assemblies. The diagram illustrating degrees of rotation shows the shell being rotated counter-clockwise in relation to the insert when viewed from the mating front of the pin insert. For ITT Cannon proprietary alternate insert positions see page 10.

## Wiring

For class E and R connectors, satisfactory moisture sealing will be obtained if AWG and MS wire sizes and insulation outside diameters are governed by this table.

Contact Size	Wire Size (MIL-W-5086)	Insulation OD		Solder Pot Size
		Limit	inches	
16	16 thru 22	.064 min. to .130 max.		.073"
12	12 thru 14	.114 min. to .170 max.		.116"
8	8 thru 10	.164 min. to .255 max.		.209"
4	4 thru 6	.275 min. to .370 max.		.332"
0	0 thru 2	.415 min. to .550 max.		.468"

## Electrical Service Data

Maximum current ratings of contacts and maximum allowable voltage drop under test conditions when assembled as in service are shown below. Maximum total current to be carried per connector is the same as that allowable in wire bundles as specified in MIL-W-5088.

Contact Size	Max. Current Rating (amps)	Test Current (amps)	Potential Drop (millivolts)
16	22	20	21
12	41	35	20
8	73	60	12
4	135	110	10
0	245	200	10

As a guide only, the following formulae can be used to determine the maximum continuous current carrying capacity of the connector.

0-5 contacts	no of contacts	x	max. current rating in free air	x	1.00
6-10	"	x	"	x	0.85
11-20	"	x	"	x	0.65
21-30	"	x	"	x	0.45
31-50	"	x	"	x	0.25

## High Potential Test Voltage

MS connectors show no evidence of breakdown when the test voltage given below is applied between the two closest contacts and between the shell and the contacts closest to the shell for a period of one minute.

MS Service Rating	Test Voltage (RMS) 60 cps	Suggested* Operating Voltages		Air Creepage Spacing Distance	
		DC	AC (rms)	nom. inches	nom. inches
Inst.	1000	250	200		1/16
A	2000	700	500	1/16	1/8
D	2800	1250	900	1/8	3/16
E	3500	1750	1250	3/16	1/4
B	4500	2450	1750	1/4	5/16
C	7000	4200	3000	5/16	1

\*as indicated in previous MS Specification and to be used by the designer only as a guide.

# MS-E/MS-R/CA xx F80 Crimp Environmental

In the latest revision of MIL-C-5015, a new class of environment resistant connectors was added. This new class F connector supplements the previous class E connector. The MS3100F is identical to the MS3100E and should be specified by the customer for new equipment design application. The class E will still be available upon request for existing programs, and upon ordering also bear the E nomenclature on the shell.

ITT Cannon MS-F and MS-R connectors are designed to operate in the extreme environmental conditions of high altitude flight. These connectors must be completely sealed to withstand moisture condensation, vibration, corona and flashover caused by high altitude environments.

MS-F and MS-R connectors have a resilient grommet with internal restrictions in the wire cavities which act as O rings around the wires. This allows the wires to slide thru the grommet with a minimum of friction, yet when the ferrule is seated and the endbell tightened it provides a perfect wire seal thru a wide variety of wire diameters. This seal at the rear, plus the interfacial seal at the front, effects a completely environment-resistant assembly when the plug is mated to an F or R receptacle. Sockets are of the closed-entry type. Contacts available in either crimp or solder termination.

Cable clamps have been integrally designed with the endbell on MS-E and MS-F connectors. Class R is without the cable clamp.

How to Order (see also pages 16, 18, 19)

**PREFIX**  
MS — Conforms to latest MIL-C-5015 revision

**SHELL STYLE**  
3100 — Wall mounting receptacle  
3101 — Cable connecting plug  
3102 — Box mounting receptacle  
3106 — Straight plug  
3108 — 90° angle plug

**CLASS**  
E & F — Environmental with resilient insulators and integral cable clamp  
R — Environmental with resilient insulators and shortened light weight end-bell; also additional sealing with O ring seal under coupling nut in styles 3106 and 3108.

**SHELL SIZE**  
Coupling thread diameter in sixteenths of an inch.

**CONTACT ARRANGEMENT**  
See pages 5 thru 9.

**CONTACT TYPE**  
P for pin; S for socket

**ALTERNATE INSERT POSITION**  
See page 8

**\* MOD CODE**  
F80 (for crimp termination available only in 16# and 12# AWG)

**RFI — RFI Shielding**  
When modification code is used 'MS' prefix must be changed to 'CA' to indicate "not to MS specification".

## Standard Data

SHELL	MATERIAL	Aluminium alloy
	FINISH	Chromate drab olive over cadmium plating
INSULATOR	MATERIAL	Polychloroprene (resilient)
CONTACTS	MATERIAL	Brass or copper alloy
	FINISH	Silver plate
	TERMINATION	Tinned solder pot or crimp
TEMP. RATING		-55°C to +125°C

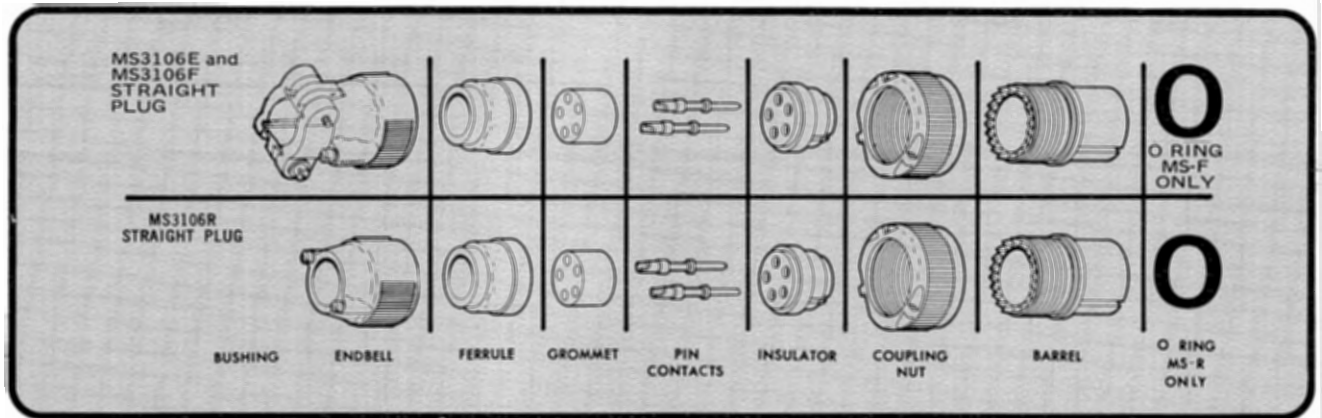

# MS-E/MS-R/CA xx F80 Crimp Environmental

In the latest revision of MIL-C-5015, a new class of environment resistant connectors was added. This new class F connector supplements the previous class E connector. The MS3100F is identical to the MS3100E and should be specified by the customer for new equipment design application. The class E will still be available upon request for existing programs, and upon ordering also bear the E nomenclature on the shell.

ITT Cannon MS-F and MS-R connectors are designed to operate in the extreme environmental conditions of high altitude flight. These connectors must be completely sealed to withstand moisture condensation, vibration, corona and flashover caused by high altitude environments.

MS-F and MS-R connectors have a resilient grommet with internal restrictions in the wire cavities which act as O rings around the wires. This allows the wires to slide thru the grommet with a minimum of friction, yet when the ferrule is seated and the endbell tightened it provides a perfect wire seal thru a wide variety of wire diameters. The MS3100R receptacle is identical in purpose to the MS3100F. The MS-3100R features a shorter lightweight endbell and mates with 3106 and 3108 plugs.

\* For socket inserts, substitute S for P following the contact arrangement number.  
\*\* Add contact arrangement number. See pages 5-9.

\* Socket inserts available but must be ordered with CA instead of MS prefix in part number. (Not to MS specification.)

This plug will mate with 3100 and 3102 receptacles and 3101 plugs.

# ER Potting Connectors

## General Information

Shell styles 00 and 06 with plastic cups and resilient insulators meet the requirements of MS3103, MS25183 and MS25183A. Also available is the 08 plug with resilient insulator and 90° angle nylon potting cup.

All potting plugs can be supplied with or without grounding means, as defined in the ordering nomenclature.

For potting connectors with resilient insulators, there is a 1/4" clearance for potting on all contact sizes.

For contact arrangements with size 8, 4 and 0 contacts, consult factory for availability.

For electrical information refer page 4.

For contact arrangements and alternate insert positions refer pages 5 thru 9.

For material information refer page 10, 11.

## How to Order

\* F80 crimp termination (available only in 16# and 12# contacts).

### PREFIX

CA-ITT Cannon prefix indicating special application or variation of MS.

### SHELL STYLE

3100 — Wall mounting receptacle  
3103 — Straight plug (with grounding lug)  
3106 — Straight plug (less grounding lug)  
3108 — 90° angle plug

\* For socket inserts substitute S for P following the contact arrangement number.  
\*\* Add contact arrangement number. See pages 5-9.

# ER Potting Connectors

## General Information

Shell styles 00 and 06 with plastic cups and resilient insulators meet the requirements of MS3103, MS25183 and MS25183A. Also available is the 08 plug with resilient insulator and 90° angle nylon potting cup.

All potting plugs can be supplied with or without grounding means, as defined in the ordering nomenclature.

For potting connectors with resilient insulators, there is a 1/4" clearance for potting on all contact sizes.

For contact arrangements with size 8, 4 and 0 contacts, consult factory for availability.

For electrical information refer page 4.

For contact arrangements and alternate insert positions refer pages 5 thru 9.

For material information refer page 10.

## How to Order

\* F80 crimp termination (available only in 16# and 12# contacts).

### PREFIX

CA-ITT Cannon prefix indicating special application or variation of MS.

### SHELL STYLE

3100 — Wall mounting receptacle  
3103 — Straight plug (with grounding lug)  
3106 — Straight plug (less grounding lug)  
3108 — 90° angle plug

### CLASS

ER - Resilient insulator, nylon potting cup and thread attachment ring

### SHELL SIZE

Coupling thread diameter figures in sixteenths of an inch

### CONTACT ARRANGEMENT

See pages 5 thru 9.

### CONTACT TYPE

P for pin; S for socket

The CA3108ER is supplied with resilient insulator, 90° nylon potting cup and threaded attachment ring with a rubber gasket under the coupling nut. This plug mates with 3100 and 3102 receptacles.

# F80 Crimp Contacts

## NOTE: For Crimp Contacts

Standard MIL-C-5015 type connectors are supplied in Solder Contact Termination. Crimp type contacts are also available and are called up by part number suffix F80, e.g. CA 3106 R 20-27 P W F80 (see page 18 for part number make-up). Contact sizes 16-G and 12-G are crimped with the hand tools below. MS-E type mains power connectors are not normally available in Crimp types.

## F80 Assembly Instructions

### Recommended Wire Stripping

### Crimping Contacts

1. Check the crimp tool to be sure that the proper crimp head locator is used.
2. Cycle the tool to be sure the indentors are open.
3. Place the contact, mating end first, into the tool.
4. Insert the stripped wire into the hollow end of the contact. Be sure the wire is inserted as far as it will go.
5. Close the tool completely to crimp. Unless the tool is closed completely, the tool will not release the contact.
6. Remove the crimped contact from the tool. Check the inspection hole to verify that the wire is fully inserted.

### Insertion of Contacts

1. Before inserting the contacts, remove the endbell, grommets, and ferrule from the receptacle. Remove the endbell, grommet, ferrule, and coupling nut from the plug. Slide the hardware over the wire bundle in the proper order for reassembly after all of the contacts are inserted.
2. To assist insertion of contacts, lubricate insert cavities with isopropyl alcohol. Alcohol will evaporate and will not leave a conductive film. **Caution: never use any lubricant other than isopropyl alcohol.** Hold the plug or receptacle body firmly and insert the wired contacts as far as possible by hand. Starting at one side of the insulator, work progressively from contact to contact across the layout. When inserting socket contacts, be sure to provide fixture space below the front face to permit length of guide pins for #16 and L12 contacts to clear insulator face. For guide pin numbers refer below.
3. Place the correct insertion tool on the contact so that the wire runs along the groove in the tool. (Tool tip will butt against the shoulder.)
4. Beginning with a cavity on the outer edge of the plug, apply a slow, even pressure perpendicular to the insulator face until the contact snaps into position. If contacts are not inserted all the way prior to removing insertion tool, do not try to reinsert the insertion tool. Instead, using the extraction tool, push the contact back to position it was in when the insertion tool was originally placed over the contact for pushin; otherwise the inside of contact cavity may be damaged by reinserting the insertion tool.
5. Inspect the front end of the insulator to assure that the contacts are inserted to the proper depth.

### Completion

After all the cavities have been filled, slide the hardware back into position on the barrel. Tighten the endbell until the ferrule and endbell are flush. Compression of the grommet in this manner results in maximum sealing characteristics of the plug.

### Extraction of Contacts

1. Select the appropriate tool. (Tool tips are reversible for either pin or socket.) Place the extraction tool over the pin or into the socket.
2. Apply a slow, even pressure to push the contact out of the rear of the insulator.

### Tools

ITT Cannon provides a complete line of crimp insertion and extraction tooling to be used with CA-F80 contacts as follows:

Contact Size	Hand Crimp Tool*	Locator
16	M-22520/1-01	TH-70
12	M-22520/1-01	TH-70

The M22520/1-01 is the MIL standard crimp tool for #12 thru #20 contacts and used to crimp #12 and 16 contacts for the CA-F80.

### Guide Pins

Guide pins are used to assist insertion of socket contact Sizes #16 and #12.

Contact	Guide Pin
#16	226-1017-000
#12	226-1018-000

Although obsoleted by MIL-T-22520, the MS3191-1 tool is commonly used in non-military commercial applications. The chart below specifies contact size and corresponding locator used with the MS-3191-1 tool.

Shell Styles	Contact Size	Locator
8S thru 16S	16 Pin	L-16-3191-7
	16 Socket	L-16-3191-46
12 thru 36	16 Pin	L-16-3191-10
	16 Socket	L-16-3191-52
	12 Pin	L-16-3191-16
	12 Socket	L-16-3191-20

Insertion and extraction tools used for these connectors are available for contact sizes 16 and 12.

Contact Size	Insertion Tools	Extraction Tools	Handle Color
16	CIT-16	CET-16-4	Blue
12	CIT-12	CET-12-2	Yellow

### Pin Contact Part Numbers

Contact Size	F80

Although obsoleted by MIL-T-22520, the MS3191-1 tool is commonly used in non-military commercial applications. The chart below specifies contact size and corresponding locator used with the MS-3191-1 tool.

Shell Styles	Contact Size	Locator
8S thru 16S	16 Pin	L-16-3191-7
	16 Socket	L-16-3191-46
12 thru 36	16 Pin	L-16-3191-10
	16 Socket	L-16-3191-52
	12 Pin	L-16-3191-16
	12 Socket	L-16-3191-20

Insertion and extraction tools used for these connectors are available for contact sizes 16 and 12.

Contact Size	Insertion Tools	Extraction Tools	Handle Color
16	CIT-16	CET-16-4	Blue
12	CIT-12	CET-12-2	Yellow

### Pin Contact Part Numbers

Contact Size	F80
16S	330-0345-016
16	330-0351-016
12	330-0351-012

### Socket Contact Part Numbers

Contact Size	F80
16S	031-0554-161
16	031-0560-161
12	031-0560-121

# High Voltage Cartridges and RFI Shielding

## High Voltage Cartridges for MS-E and MS-R

- Standard contact arrangements are adaptable to high voltage applications.
- Eliminates need for a separate high voltage connector.
- Assembly time is reduced.

High voltage conductors as well as power and/or control signal conductors can now be connected simultaneously in standard MS connectors. Previously, MS connectors involved in high voltage circuitry required individual design considerations and could only be ordered as a "special". The new high voltage cartridge allows conversion of a standard connector to one capable of handling up to 15,000 volts DC (Test Voltage — mated), operating voltage — sea level 5,000 V.D.C. or 3,500 V.A.C. These cartridges are molded of nylon and provide a high degree of arc-over protection between adjacent contacts or between a contact and the connector shell. Unmated, each cartridge provides a nylon isolating barrier capable of withstanding up to 10,000 volts DC (or peak).

The contact within the cartridge is a 7.5 amp, size 20, crimp snap-in type with dielectric rear release clip retention. This contact is removable with the plastic CIET 20 insertion/extraction tool provided the insulation is .084" or less. The contact may be crimped with the standard MS3191 tool and hand inserted into the nylon cartridge. The cartridge body is installed in the connector at the factory.

High voltage cartridges now available fit in the space normally occupied by a #4 or #8 size contact in an MS-E, MS-R or MS-F type connector.

## R.F.I. Shielding

A further modification of the versatile MIL-C-5015 series provides continuity of R.F.I. screening through the mating connectors. A special end bell or rear end termination provides clamping of the braid, while spring fingers maintain contact between plug and receptacle.

Performance, physical characteristics, and materials are identical to the MS-E series shown on pages 19 thru 14.

## Ordering Information

To specify R.F.I. shielding add the suffix R.F.I. to the standard MS'E'/'R' front number as shown on page 18.

Note that the 'MS' prefix would be replaced by 'CA' as a result of the modification, e.g. CA3106E - 18-19 R.F.I.

## R.F.I. Shielding

A further modification of the versatile MIL-C-5015 series provides continuity of R.F.I. screening through the mating connectors. A special end bell or rear end termination provides clamping of the braid, while spring fingers maintain contact between plug and receptacle.

Performance, physical characteristics, and materials are identical to the MS-E series shown on pages 10 thru 14.

## Ordering Information

To specify R.F.I. shielding add the suffix R.F.I. to the standard MS'E'/'R' front number as shown on page 18.

Note that the 'MS' prefix would be replaced by 'CA' as a result of the modification, e.g. CA3106E - 18-19 R.F.I.

# CEA-R Mains Power Connectors

CEA-R Series for Single and Three Phase Power Applications:—

Features:—

- Compact rugged construction with moisture proof sealing for use in harsh industrial environments.
- Optional Bayonet or Threaded Coupling
- Leading Earth Pin Contact
- Cable Plug Earth Contact Grounded to Shell
- Combinations of Power and Signal Layouts
- Variety of current and voltage ratings for single phase and Star/Delta three phase applications
- Solder termination
- Temperature rating  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$
- Silver plated contacts

This series of Connectors has been developed to meet the safety requirements of the S.E.C.V. for "Prescribed Articles". Based on the proven MS-E series, with appropriate modifications, the following listings cover types already developed. The column, "Modified From", indicates the basic type. Dimensional details are shown on pages 12 thru 14. For other requirements, refer to Factory.

For bayonet coupling add suffix 'B' to description except where noted.

# CA Bayonet Lock

## How to Order

The photographs (below), illustrate the Bayonet Lock types available in each of the shell styles illustrated on Pages 22, 23, and 24.

## Six Advantages of Bayonet Lock

1. Fast coupling and uncoupling
2. Vibration resistant — loosening of the coupling nut under vibration or shock conditions prevented.
3. Unaffected by contaminants such as, dust, sand, etc.
4. Audible snap in lock provides for more safety in coupling.
5. Water-proof to 10m/30 ft.
6. Temperature range  $-55^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$

## Introduction

The CA Bayonet belong to the family of MS Connectors which were initially developed for aircraft, but which today are internationally used in the electrical equipment of land and sea-borne vehicles, in industrial facilities, telecommunication equipment, radar units, etc.

These connectors are interchangeable with all corresponding MS connectors to MIL-C-5015, as they have the same mounting dimensions and contact arrangements. It should be noted, however, that they are not mateable with the standard MS types due to bayonet lock feature.

## Design Features

Bayonet lock connectors are rugged, shock and vibration resistant, and suitable for operating in water to a depth of 10 m/30 ft.

An "O" ring and interfacial seal ensure that mating connectors are leak proof and a grommet provides wire sealing. The alignment of three red arrows on the receptacle with three red dots on the plug indicate positive mating. All types shown, although not conforming to, exceed the requirements of German standards VG-95234 and VG-95235 and also MIL-C-5015. For types conforming to VG-95234 and VG-95235, consult factory.

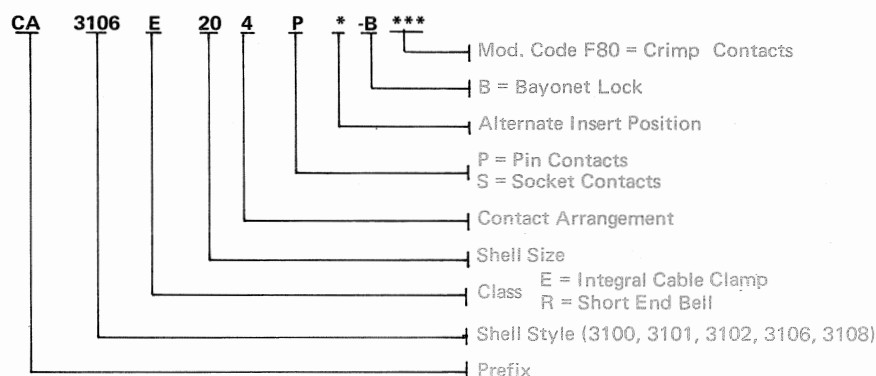

For electrical performance data refer to page 4.  
For contact arrangements and alternate insert positions refer to pages 5 thru 9.  
For material information refer to page 10.

## MS3057A

CABLE CLAMP  
with or without Bushing

The MS3057A cable clamp is made for plugs and receptacles that have an endbell with external conduit threads. The double clamping action provides a more balanced, positive hold on the wires and greatly reduces moisture transmission. Provision is made for safety wiring. This clamp is supplied without bushing; to order bushing, add "with bushing" after part number.

\* To order cable clamp with bushing, add "with bushing" after part number, i.e., MS3057-10A with bushing.

† MS bushings are polychloroprene.

● PREFERRED

## MS3420

TELESCOPING BUSHING

TELESCOPING BUSHING WITH  
MS3057A CABLE CLAMP

Telescoping gland bushings (used with MS3057A cable clamp) keep dirt, oil and moisture out of endbell. Taping or wrapping wires is eliminated since bushing protects wires going thru clamp. Combinations of bushings may be used to decrease cable entry diameter to improve sealing. Material is polychloroprene (MS)

## MS3057A

CABLE CLAMP  
with or without Bushing

The MS3057A cable clamp is made for plugs and receptacles that have an endbell with external conduit threads. The double clamping action provides a more balanced, positive hold on the wires and greatly reduces moisture transmission. Provision is made for safety wiring. This clamp is supplied without bushing; to order bushing, add "with bushing" after part number.

## MS3420

TELESCOPING BUSHING

TELESCOPING BUSHING WITH  
MS3057A CABLE CLAMP

Telescoping gland bushings (used with MS3057A cable clamp) keep dirt, oil and moisture out of endbell. Taping or wrapping wires is eliminated since bushing protects wires going thru clamp. Combinations of bushings may be used to decrease cable entry diameter to improve sealing. Material is polychloroprene (MS)

# Additional Mains Power Connectors

Other mains power types available include:-

**XLR-LNE**

A specially designed version of the XLR series for use in power applications up to 250V AC 5 AMP. Complies with the safety standards of BS4515. S.E.C.V. Approval Nos. 4166 and 6478 apply to cord connectors. 3 contacts.

**EP-LNE**

A power version of the EP with similar features to that of the XLR-LNE series, but with a rating of 250V AC 7.5 AMPS. S.E.C.V. Approval No. 6730. 3 contacts.

**EP-LNEM**

A further development of the EP series for applications where separate technical and mains earths are required. 250V AC 7.5 AMP. S.E.C.V. Approval Nos. 74807, 74808, 74809. 4 contacts.

**1315  
ANDERSON  
POWERPOLE**

Single pole modular type for special applications, suitably installed within equipment. Rated 415V AC 10 AMP. Certificate of Suitability C.5.2015.
