or use the remote control  
Control Light Mode

With remote control

8.4cm/3.31in

22.5cm/8.86in

Question : Why does the solar light can not work ?

Answer : Please check the following items.

1. Confirm switch is on or not.
2. To maximum battery capacity, the solar sensor light should be charged by direct sunlight at least for eight hours before initial use.
3. To ensure the normal working of light detector, please install it away from other light sources.
4. Confirm whether it is being continuously used in a long-term and no charge, recharge it timely before use again.
5. Confirm installation direction is correct(solar panel should be facing up).
6. Confirm no objects blocking it and solar panel can receiving sunlight.
7. Please don't install the light too close to another light, it will effect the light work.

Steps for usage:

1. Turn on the main switch when using the product for the first time.
2. Press the green "on off" button to power on the lamp or adjust the modes.
3. There are three modes to adjust.

Three modes:

Mode 1: human body detection mode (the light power 100% brightness when a person walks by, and it is off after 20 seconds)

Mode 2: human body induction + low light mode (the light power 100% brightness when people pass, and power 30% dim brightness after 20 seconds)

Mode 3: Light up with 50% low brightness always.

Attention!!!

When the battery is completely discharged, the solar lamp may not light up after a short charge or charge on cloudy days, the solar lamp must be exposed to direct sunlight for at least 2-3 days to restart.

## 3 Mode

### Mode ①

PIR motion inductor  
Light OFF

### Mode ②
