A BREAKTHROUGH IN OFFICE AUTOMATION

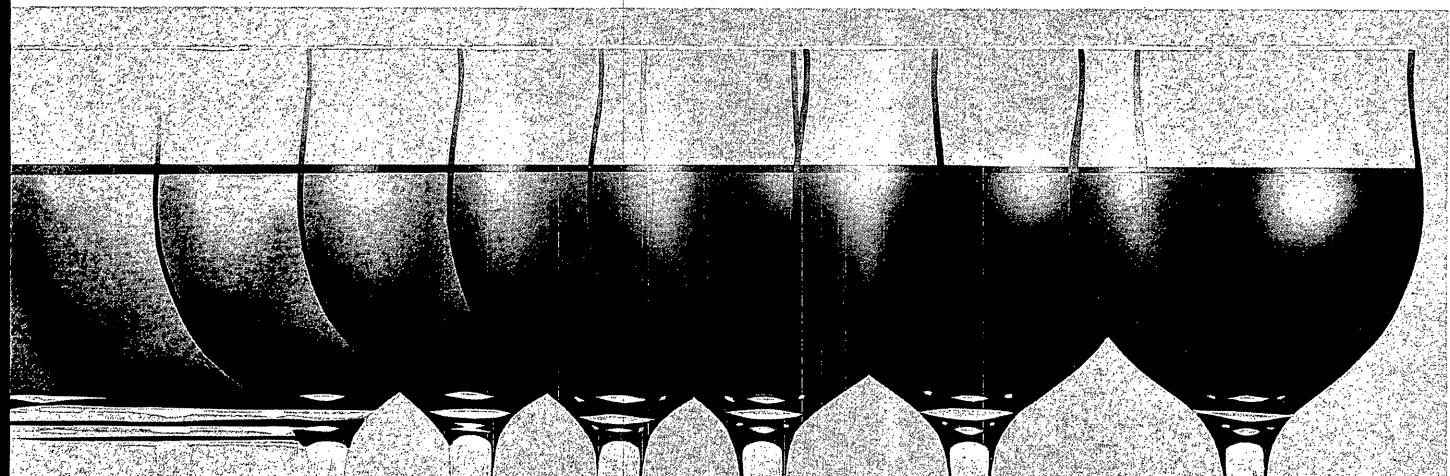

YASKAWA'S DC SERVOMOTORS WITH ENCODER

FROM THIS...

(BY STEPPING MOTORS)

TO THIS...

(BY DC SERVOMOTORS)

OPTIMUM SPECIAL DESIGN — SMALL AND LIGHT

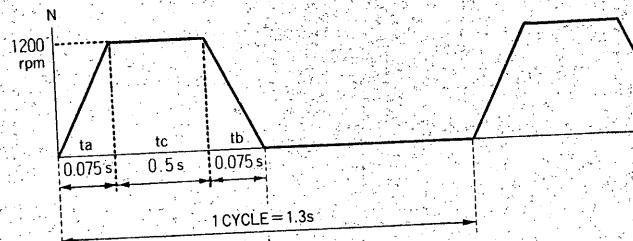

Normally, stepping motors have been used for serial printers however, DC motors have been employed recently, following the development of multi-function printers. This is because DC servomotors can provide stable drive operation in a wider range of speed. YASKAWA MINERTIA MOTORS F SERIES are small and light DC servomotors which have achieved reduction of torque ripple by optimum special design. F SERIES have been accepted for a large variety of applications, such as SERIAL PRINTERS, PLOTTERS, COPY MACHINES, etc.

F SERIES B TYPE

MOTOR SELECTION METHOD

<Example>

When FB5M20E is used for printer carriage (load inertia: 8.3×10^{-3} oz. in s^2 , load torque: 9.0 oz. in) in the following duty.

$$\text{Load inertia: } J_L = 8.3 \times 10^{-3} \text{ oz}\cdot\text{in}\cdot s^2 \quad \text{Load torque: } T_L = 9.0 \text{ oz}\cdot\text{in}$$

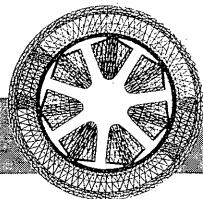

$$\text{Motor inertia: } J_M = 0.86 \times 10^{-3} \text{ oz}\cdot\text{in}\cdot s^2$$

$$\text{Acceleration torque } T_{pa} = \frac{2\pi \times N (J_M + J_L)}{60 \times T_a} + T_L = \frac{2\pi \times 1200 (0.86 + 8.3) \times 10^{-3}}{60 \times 0.075} + 9.0 = 24 \text{ oz}\cdot\text{in}$$

$$\text{Deceleration torque } T_{pb} = \frac{2\pi \times N (J_M + J_L)}{60 \times T_b} - T_L = \frac{2\pi \times 1200 (0.86 + 8.3) \times 10^{-3}}{60 \times 0.075} - 9.0 = 6.30 \text{ oz}\cdot\text{in}$$

$$\text{Actual torque } T_{rms} = \sqrt{\frac{T_{pa}^2 \times t_a + T_L^2 \times t_c + T_{pb}^2 \times t_b}{t}} = \sqrt{\frac{24^2 \times 0.075 + 9.0^2 \times 0.5 + 6.3^2 \times 0.075}{1.3}} = 8.2 \text{ oz}\cdot\text{in}$$

Since it is found from specifications and characteristic tables that FB5M20E rating torque is 8.3 oz·in and peak torque is 38.90 oz·in, this motor can be used.

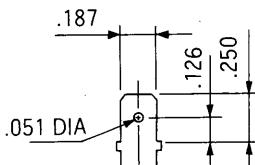

■ RATINGS AND SPECIFICATIONS

Specifications	Type	FB5T20E	FB5S20E	FB5M20E	FB5L20E
Peak Rated Torque	oz. in.	22.2	26.4	38.9	55.6
Rated Torque	oz. in.	4.2	5.6	8.3	11.8
Torque Constant	oz. in./amp	5.1	10.3	13.1	8.38
Armature Winding Resistance	Ω	6.2	12.5	11.2	3.1
Armature Inductance	mH	2.4	6.0	6.2	1.9
Peak Current	A	4.4	2.6	3.0	6.7
Induced Voltage Constant	V/1000r/min	3.8	7.6	9.7	6.2
Viscous Damping Coefficient	oz. in./1000r/min	0.056	0.083	0.125	0.14
Friction Torque	oz. in.	0.56	0.69	0.83	0.97
Inertia (With Encoder)	oz. in. sec ² × 10 ⁻³	0.42	0.63	0.86	1.1
Mechanical Time Constant	millisec	14	10.5	8.4	6.9
Electrical Time Constant	millisec	0.39	0.48	0.55	0.61
Power Rate	kW/sec	0.29	0.35	0.57	0.90
Torque Inertia Ratio	rad/sec ²	10000	8880	9670	10760
Rated Speed	r/min	2000	2000	2000	2000
Max. Safe Operating Speed	r/min	4000	4000	4000	4000
Rated Voltage	V	16.1	26.0	30.0	19.4
Rated Current	A	1.0	0.66	0.76	1.66
Constant Output	W	6.2	8.2	12.3	17.4

- Time Rating: Continuous
- Dielectric Strength: 500VAC/1 min
- Applicable Environment:
 - Applicable Location: Indoor
 - Ambient Temperature: -10 to + 40°C
 - Humidity: 80% RH Max.

- Direction of Rotation: When (+) current is supplied to terminals with red cap, it rotates counterclockwise from the drive end.

FASTON 187 SERIES TAB
or equivalent

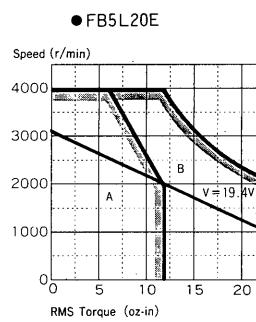

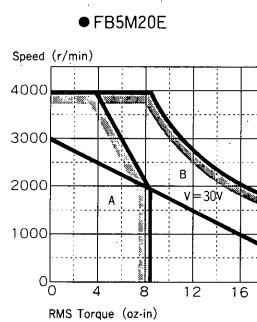

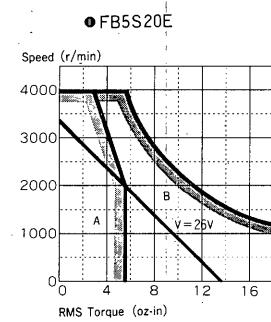

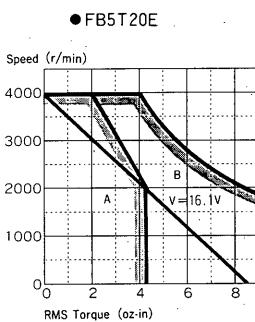

The values described above are those with HA type encoder.

With HS type encoder (200, 240 pulses), some values differ since the inertia is larger.

$$\begin{aligned} \text{Inertia } 200 \text{ pulses } &+ 0.11 \times 10^{-3} \text{ oz. in. sec}^2 \\ 240 \text{ pulses } &+ 0.24 \times 10^{-3} \text{ oz. in. sec}^2 \end{aligned}$$

■ SPEED-TORQUE-CURRENT CHARACTERISTICS

A: Area of safe continuous duty without air cooling.

B: Area of intermittent duty.

Note: Motor mounted on 4 in × 4 in × 1/8 in heat sink.

Environmental conditions:

Temperature 25°C

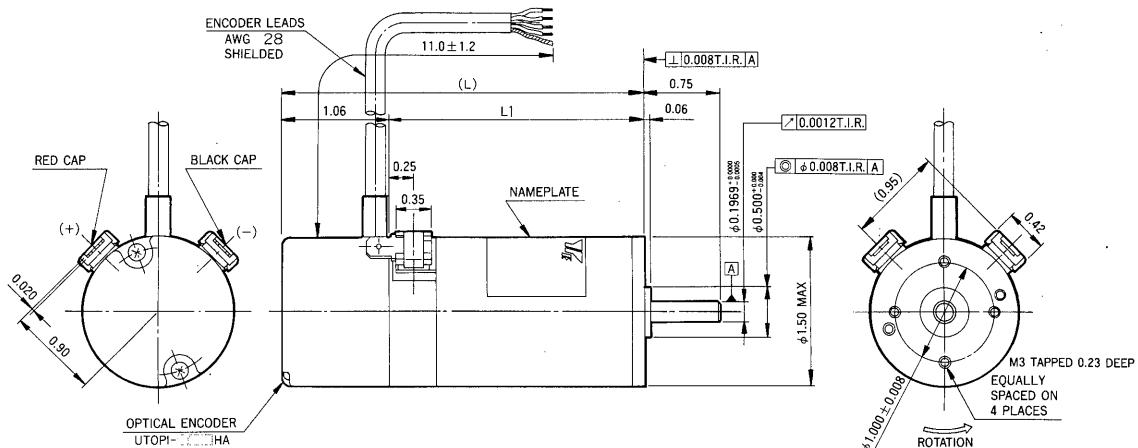

Humidity 80% max.

Curve data for an armature temp. of 100°C

WITH HIGH ACCURACY ENCODER "HA" TYPE
