Installation Instructions

Instructions to Bracket Mount

1. To ensure proper operation of the slides, make certain all mounting screws are inserted so the screw heads are inside the slides. (No washers on the inside of the slides.)
2. If sufficient space is available to install chassis from the rear of the rack, separate slide members (from the rear) for ease of installation. Otherwise, use access holes provided for mounting slide members to chassis and rack.
3. Using mounting kits and brackets, mount brackets to slide outer members (largest). For adjustment purposes screw the back brackets on loosely.
4. Install slides into EIA rack with #10-32 (customer supplied) screws and secure with bar nuts. Rear adjustment is possible by aligning the back bracket. Do not tighten screws until final adjustment is made.
5. Mount slide inner members (smallest) to the chassis. Position inner members 1/8" [3.2] from the front edge of the chassis making sure both slides are parallel.
6. Check slide alignment by opening and closing the chassis. Any sign of binding indicates lateral stress or misalignment.
7. Adjust slide position until movement is smooth. Tighten all screws and if necessary use more to secure slides and complete installation.

Instructions to Hard Mount

1. Follow steps 1 & 2 of "Bracket Mount" instructions.
2. Install slide outer members (largest) into cabinet using # 8 pan head screws. Be sure slides are parallel.
3. Mount slide inner members (smallest) onto chassis. Leave all screws loose for future adjustment. Make sure slides are parallel.
4. Follow steps 6 & 7 of "Bracket Mount" instructions.
