Ribbon Selection Criteria

1. Ribbons should be 4+ mm WIDER than the label backing paper. Failure to follow this guideline will generally cause premature print head wear and failure which will NOT be covered by warranty.
2. **WAX** - For general purpose printing on paper and specially treated synthetics.
3. **WAX / RESIN** - For high quality print on the full range of labels and tags.
4. **RESIN** - For high quality print on a full range of synthetic materials.
5. **Selection and Testing** - As Ink, varnish over-printing and surface treatments can totally change the performance of a ribbon on a particular material, we STRONGLY recommend that a full test on any pre-printed label/tag BEFORE a large ribbon purchase is made. We are unable to provide a refund any purchases where the user has failed to fully test the label in its final use.
