

# Advantage LX Printer Update

The Advantage LX continues to be a robust and reliable printer following the lineage of Blaster and Blaster Advantage printers.

The Advantage LX printer line has been updated with new electronics, firmware, and power supply to ensure continued availability.

Updated Advantage LX printers have the following noticeable differences:

- "G" designation at the end of the configuration number (i.e., LBD42-2043-013G is the updated version of LBD42-2043-013)
- 24 VDC auto-ranging (100-240 VAC input) and separate power cord
- 4-pin power supply connector instead of a barrel plug
- Updated firmware
- Referred to on our Web site as Advantage LX (24 VDC version)

Updated Advantage LX printers are designed to be application and code compatible with Advantage LX (19 VAC version) printers:

- Same parser and code interpretation
- Same performance specifications
- Same communication interface combinations
- Same durable and reliable mechanical design and print heads
- Same appearance and functionality

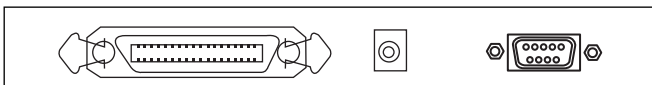

New features for the updated Advantage LX printers include facilitated utilization with the CognitiveTPG Administrator Utility and a more energy efficient power supply.

New Serial Label shows:

- Configuration No. LBD42-2043-013G
- Model No. LBD42-2043-013
- Serial No. starts with "L"
