Using Microsoft® Windows® XP System Restore

The Microsoft Windows XP operating system provides System Restore to allow you to return your computer to an earlier operating state (without affecting data files) if changes to the hardware, software, or other system settings have left the computer in an undesirable operating state. See the Windows Help and Support Center (see "Finding Information" on page 5) for information about using System Restore.

 **NOTICE:** Make regular backups of your data files. System Restore does not monitor your data files or recover them.

Creating a Restore Point

- 1 Click the **Start** button and click **Help and Support**.
- 2 Click **System Restore**.
- 3 Follow the instructions on the screen.

Restoring the Computer to an Earlier Operating State

 **NOTICE:** Before you restore the computer to an earlier operating state, save and close any open files and exit any open programs. Do not alter, open, or delete any files or programs until the system restoration is complete.

1 Click the **Start** button, point to **All Programs**→**Accessories**→**System Tools**, and then click **System Restore**.

2 Ensure that **Restore my computer to an earlier time** is selected and click **Next**.

5 Click **Next**.

The **Restoration Complete** screen appears after System Restore finishes collecting data and then the computer restarts.

6 After the computer restarts, click **OK**.

To change the restore point, you can either repeat the steps using a different restore point, or you can undo the restoration.

Undoing the Last System Restore

 **NOTICE:** Before you undo the last system restore, save and close all open files and exit any open programs. Do not alter, open, or delete any files or programs until the system restoration is complete.

Dell Diagnostics

CAUTION: Before you begin any of the procedures in this section, follow the safety instructions in the *Product Information Guide*.

When to Use the Dell Diagnostics

If you experience a problem with your computer, perform the checks in "Solving Problems" on page 32 and run the Dell Diagnostics before you contact Dell for technical assistance.

It is recommended that you print these procedures before you begin.

NOTICE: The Dell Diagnostics works only on Dell™ computers. Using this program with other computers can cause incorrect computer responses or result in error messages.

The Dell Diagnostics allow you to:

- Perform quick checks or extensive tests on one or all devices
- Choose how many times a test is run
- Display or print test results or save them in a file
- Suspend testing if an error is detected or terminate testing if a certain number of errors occur
- Access online **Help** screens that describe the tests and how to run them
- Read status messages that tell you whether tests completed successfully
- Receive error messages if problems are detected

Starting the Dell Diagnostics From Your Hard Drive

- 1 Turn on (or restart) your computer.
- 2 When the DELL™ logo appears, press <F12> immediately.

 **NOTE:** If you see a message stating that no diagnostics utility partition has been found, see "Starting the Dell Diagnostics From the Drivers and Utilities CD" on page 35.

If you wait too long and the operating system logo appears, continue to wait until you see the Microsoft Windows desktop. Then shut down your computer and try again. For more information on shutting down your computer, see your *User's Guide*.

Before You Start Testing

CAUTION: Before you begin any of the procedures in this section, follow the safety instructions in the *Product Information Guide*.

- Turn on your printer if one is attached.
- Enter system setup, review your computer's configuration information, and enable all of your computer's components and devices, such as connectors.

Beep Codes

Your computer might emit a series of beeps during start-up if the monitor cannot display errors or problems. This series of beeps, called a beep code, identifies a problem. One possible beep code (code 1-3-1) consists of one beep, a burst of three beeps, and then one beep. This beep code tells you that the computer encountered a memory problem.

If a beep code is emitted, write it down and look it up in the following table.

Code	Cause
1-1-2	Microprocessor register failure
1-1-3	NVRAM read/write failure
1-1-4	ROM BIOS checksum failure
1-2-1	Programmable interval timer failure
1-2-2	DMA initialization failure
1-2-3	DMA page register read/write failure
1-3	Video Memory Test failure
1-3-1 through 2-4-4	Memory not being properly identified or used
1-3-2	Memory problem
3-1-1	Slave DMA register failure
3-1-2	Master DMA register failure
3-1-3	Master interrupt mask register failure
3-1-4	Slave interrupt mask register failure
3-2-2	Interrupt vector loading failure
3-2-4	Keyboard Controller Test failure
3-3-1	NVRAM power loss
3-3-2	Invalid NVRAM configuration
3-3-4	Video Memory Test failure
3-4-1	Screen initialization failure

Code	Cause
3-4-2	Screen retrace failure
3-4-3	Search for video ROM failure
4-2-1	No timer tick
4-2-2	Shutdown failure
4-2-3	Gate A20 failure
4-2-4	Unexpected interrupt in protected mode
4-3-1	Memory failure above address 0FFFFh
4-3-3	Timer-chip counter 2 failure
4-3-4	Time-of-day clock stopped
4-4-1	Serial or parallel port test failure
4-4-2	Failure to decompress code to shadowed memory
4-4-3	Math-coprocessor test failure
4-4-4	Cache test failure

Error Messages

 **NOTE:** If the message is not listed, see the documentation for either the operating system or the program that was running when the message appeared.

If an error occurs during start-up, a message may be displayed on the monitor identifying the problem. See "Error Messages" in the *User's Guide* for suggestions on resolving any problems.

Diagnostic Lights

 **CAUTION:** Before you begin any of the procedures in this section, follow the safety instructions in the *Product Information Guide*.

To help you troubleshoot a problem, your computer has four lights labeled "1," "2," "3," and "4" on the front. The lights can be off or green. When the computer starts normally, the lights flash. After the computer starts, all four lights display solid green briefly and then turn off to indicate normal operation. If the computer malfunctions, the pattern of the lights identify the problem.

Light Pattern	Problem Description	Suggested Resolution
	The computer is in a normal off condition or a possible pre-BIOS failure has occurred. NOTE: The diagnostic lights turn off after a short time if the computer is in a normal operating condition after POST.	Plug the computer into a working electrical outlet and press the power button.

	Memory modules are detected, but a memory failure has occurred.	<ol style="list-style-type: none"> 1 Reseat the memory modules to ensure that your computer is successfully communicating with the memory. 2 Restart the computer. 3 If the problem still exists, remove all the memory modules and install one memory module in memory module connector 4. 4 Restart the computer. The following message appears: Alert! Operating in Debug Mode. Please Populate Memory in Pairs for Normal Operation. 5 Press <F1> to boot to the operating system. 6 Run the Dell Diagnostics. See page 34 for instructions. 7 If the memory module passes, shut down the computer, remove the memory module, and then repeat the process with the remaining memory modules until a memory error occurs during start-up or diagnostic testing. If the first memory module tested is defective, repeat the process with the remaining modules to ensure that the remaining modules are not defective. 8 When the defective memory module is identified, contact Dell for a replacement. Frequently Asked Questions

How Do I...	Solution	Where to Find Additional Information
Set up my computer to use two monitors?	If your computer has the required graphics card to support dual-monitor setup, then look in your shipping box for a Y-cable. The Y-cable has a single connector on one end (plug this connector into the back panel) and branches into two connectors (plug these connectors into the monitor cables). For the tower computer, see page 10 and for the desktop computer, see page 15.	See "Setting Up Your Computer (Tower Orientation)" on page 9 or "Setting Up Your Computer (Desktop Orientation)" on page 14 for information on connecting dual monitors to your computer.
Connect my monitor when the monitor cable connector doesn't seem to fit the connector on the back of my computer?	If your graphics card has a DVI connector but your monitor has a VGA connector, then you need to use an adapter. An adapter should be included in the shipping box.	See "Setting Up Your Computer (Tower Orientation)" on page 9 or "Setting Up Your Computer (Desktop Orientation)" on page 14 for information on connecting monitors to your computer. For more information, contact Dell. For information on contacting Dell, see your <i>User's Guide</i> .
Connect my speakers?	If you have a sound card installed, connect the speakers to the connectors on the card. For the tower computer, see page 13 and for the desktop computer, see page 18.	See the documentation that came with your speakers for more information.
