GREENWOODS
COMMUNICATIONS

www.greenwoodscomms.com

defining excellence in
global network solutions

Greenwoods Communications is a leading provider of turnkey solutions to the telecoms market. The company supplies major fixed and mobile operators, cable TV companies and OEMs with a complete range of modular services. These include outsourcing of procurement and logistics, custom design and manufacture, network installation and upgrading, de-installation and extensive in-house training facilities. Over 20,000 product lines are stocked in our 150,000 sq ft warehousing facility in Birmingham.

During the many years that Greenwoods have served the communications industry, we have gained a great understanding and expertise of the most commonly used products from leading manufacturers Amphenol, ITT Cannon and Radiall. The products listed in this catalogue should meet your requirements – however, if you do not find the product you are looking for please contact us as we have many less commonly used items held in stock.

defining excellence in **global network** solutions

WHAT IS TYPE 54?

The Type 54 range of connectors have been developed by ITT Cannon in conjunction with British Telecom. Type 54 is a hybrid version of the Type 43 connector commonly used in the UK and the 1.0/2.3 connector that is used extensively throughout Europe and the US.

The Type 54 connector combines the 1.0/2.3 interface and locking system with the termination methods and benefits of the Type 43 connector. As a result, UK installers can use the Type 54 connector without having to be re-trained or re-equipped with new tooling.

The connector also benefits from the 1.0/2.3 connector interface which offers higher density due to its smaller size (compared with the 1.6/5.6 and Type 43 ranges).

WHAT IS QT?

QT or Quick Termination is ITT Cannon's unique method of assembling coaxial connectors. The technique provides a high pressure centre conductor joint of exceptional mechanical integrity, **without crimping** the centre contact.

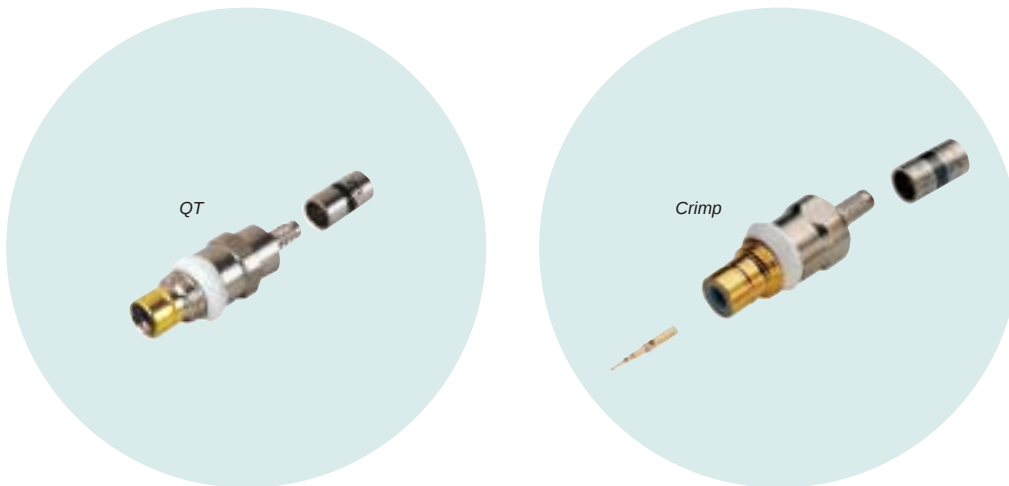

Designed to meet the requirements of digital telecommunications, the QT Type 43 connector meets or exceeds the performance requirements of BS9210F0022.

At a glance

- No centre contact crimp operation
- Pre-assembled main body, including contact
- Only two pieces to handle meaning termination can be achieved in under 45 seconds
- High pressure, gas tight joint
- Eliminates centre contact crimp tools
- BS9210F0022 interface

RF Coaxial | 75Ω-120Ω Baluns

The following baluns solve the problem of meeting various interconnection standards. In some countries, 2Mbit signals are carried over 75Ω coax and in others 120Ω twisted pair. This can cause numerous problems, particularly for OEMs where varying interconnection requirements must be met.

TPT's versatile G.703, 75Ω to 120Ω balun has been designed for quick, secure, high-density installations to provide a high level performance that also conforms to the requirements of ITU G.703 for low signal loss.

Features include:

- Cost effective
- High density design
- Fast installation time – no installation tools needed
- Direct installation onto high density DDF blocks
- Positive cable connection – easy to re-route
- 48 ISDN circuits can be accommodated in a 2U, 19" patch panel
- Each balun assembly incorporates two coaxial connections for Tx & Rx conversion
- Low signal loss

Type 43 to RJ45 Style 20 balun

Manufacturer	Description	Reference	Pack Quantity	Model Number	Greenwoods Part Number
TPT	Left hand version. Housing colour black.	G.703	single	TPTBA2043/L	99CG0021
TPT	Right hand version. Housing colour grey.	G.703	single	TPTBA2043/R	99CG0022

75Ω-120Ω Baluns | RF Coaxial

The ITT Cannon balun converts the signal from 75Ω to 120Ω. The small size means that they will fit into all standard mounting arrangements, without having to provide special or non-standard panels. The device can be fitted to a screened or unscreened twisted pair cable via IDC contacts, making the termination quick and simple.
