

CABLING PROCEDURE

CP-1000

1. Cut cable end square, place clamp-nut, slip washer (when supplied), and gasket over jacket. Remove jacket to dimension "A."

2. Comb out braid and taper forward. Place braid clamp over braid against jacket cut.

3. Fold braid back over braid clamp and trim as shown above. Remove dielectric to dimension "B." Cut center conductor to dimension "C."

When cable positioning insulators are used adjust trim code dimensions as shown below, and assemble as indicated.

4. Solder contact to center conductor. For access type angle connectors, omit this step and proceed to step 5.

For captive contacts: (a) assemble bushing and insulator, attach contact, or (b) assemble washer and larger (cable end) insulator. Attach contact. Assemble smaller (mating end) insulator.

When center contact is undercut captive type, insert cable assembly until insulator detent locks into contact.

5. Thread assembly into connector, and lock securely. Vee gasket must be split by braid clamp.

6. For access type angle connectors, solder center conductor in contact groove. Close access opening.
