**Industrial** Tools

## Air Motors

- 160 W to 2900 W
- Comprehensive range
- Lubrication free
- Stainless steel
- High torques

More Than Productivity

# Why choose Desoutter Air Motors ?

Desoutter offers a wide range of rotating vane air motors in stainless steel and lubrication free versions, with power ranging from 0.16 kW (0.21 hp) to 2.9 kW (3.9 hp). Most motors can be supplied as either unidirectional with a threaded shaft, or reversible with a keyed shaft. Alternative output options are also available. Desoutter air motors can also be Atex certified for environments with potentially explosive atmospheres.

Air motors are an ideal solution for many applications in such varied equipment as material handling, packaging, strapping, or printing machinery, petrochemical and agricultural equipment, food processing machinery, and many more custom and standard machines.

Air motors offer many advantages over electric motors, and are often the only feasible option for driving automation.

## BENEFITS OF AIR MOTORS OVER ELECTRIC MOTORS

- MAY BE LOADED UNTIL FULLY STALLED
- OVERLOAD SAFE
- TORQUE INCREASE AT MOUNTING LOAD
- LOW INSTALLATION COSTS
- EXPLOSION PROOF
- OPERATIONALLY SAFE (DUST, GAS, WATER)
- LOW WEIGHT AND SMALL SIZE
- HIGH POWER DENSITY
- CAN BE STERILIZED

The perfect solution for your application...

# Why choose a Air Motor

## Heavy duty

- VERY LOW MAINTENANCE
- RESISTANT TO AGGRESSIVE AGENTS
- SPECIAL DESIGN FOR FOOD INDUSTRY
- SUITABLE FOR HIGH AND LOW TEMPERATURES
- SUITABLE FOR DIRTY ATMOSPHERES
- ROBUST DESIGN
- NO RISK OF OVERHEATING

## Efficiency

- LIGHT AND COMPACT PRODUCT
- STOP & START REPEATEDLY WITHOUT DAMAGE
- NO OVERLOAD RISK MOTOR STALLS WITHOUT DAMAGE
- ATEX AVAILABLE FOR POTENTIALLY EXPLOSIVE ENVIRONMENTS
- WIDE ACCESSORIES RANGE & MODULAR OUTPUT FOR CUSTOMIZATION
- EASY TO CONTROL, ADJUST, INSTALL & REVERSE
- HIGH PERFORMANCE WITH LOW AIR CONSUMPTION

## Environmentally Friendly

- SUITABLE FOR CLEAN ATMOSPHERES
- DESIGNED FOR LOW AIR CONSUMPTION
- LUBRICATION FREE OPTION
- NO ADDITIONAL POLLUTION

# Selecting your Air Motor

## Glossary information:

M R 16 12300 K S L SI

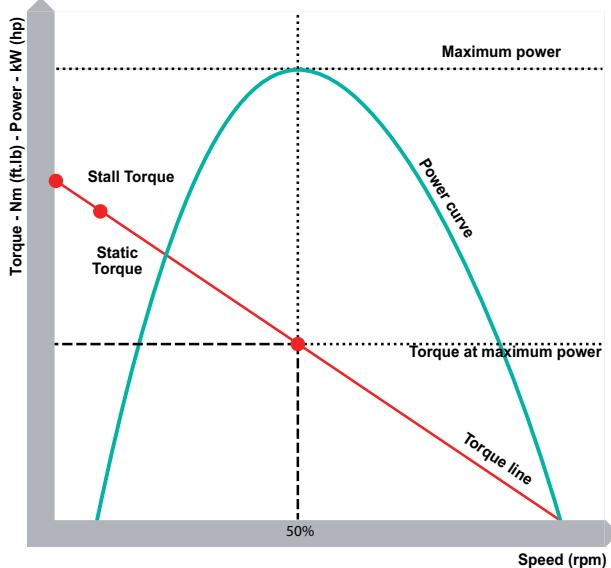

Vane Air Motor	Power in Kw	SI = Silencer included
O = Clockwise rotation	16 = 0.10-0.16	L = Lubrication free
R = Reversible	25 = 0.16-0.25	S = Stainless steel
	39 = 0.23-0.39	K = Keyed shaft
	65 = 0.50-0.65	T = Threaded Shaft
	84 = 0.58-0.84	
	180 = 1.40-1.83	
	290 = 2.52-2.91	
	Free speed	

## Air motor performance

Air motor performance depends on the air pressure and air flow being supplied to the tool. By adjusting pressure and flow, we can change the torque and speed output of the air motor. Air motor peak performance is at **6.3 bar (90 psi)**.

The **main technical references** of an air motor are:

- POWER IN Watt (hp)
- SPEED AT MAXIMUM POWER, rpm
- TORQUE AT MAXIMUM POWER, Nm (ft.lb)
- STATIC TORQUE, Nm (ft.lb)
- FREE SPEED, rpm
- AIR CONSUMPTION  
AT MAXIMUM POWER, l/s (cfm)

Some applications require a certain stall torque. This can be calculated by taking the torque at maximum power and multiplying this by two. Regulating the pressure is necessary when controlling the stall torque.

# Selecting your Air Motor

## Adjusting the performance of the Air Motor

The performance can be modified using a regulator that **reduces or increases the air pressure** to the motor. Consequently there is a decrease or increase of the power, **torque and speed values**. To calculate performance when the supply pressure is different to 6.3 bar, multiply the data at 6.3 bar by the correction factors below.

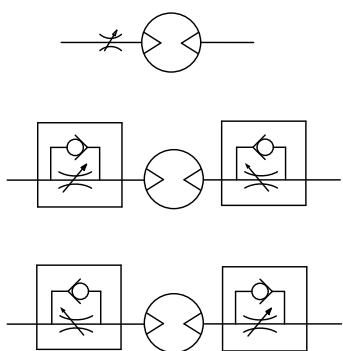

Performance coefficient vs the pressure:

AIR PRESSURE (Bar)	SPEED	TORQUE	AIR CONSUMPTION
(Psi)			
7	101	1.01	1.09
6	87	0.99	0.95
5	73	0.93	0.79
4	58	0.85	0.63
3	44	0.73	0.48

There are two methods to adjust the performance of a motor

- WITH AN AIR FLOW REGULATOR TO CONTROL THE SPEED
- WITH AN AIR PRESSURE REGULATOR TO CONTROL THE TORQUE

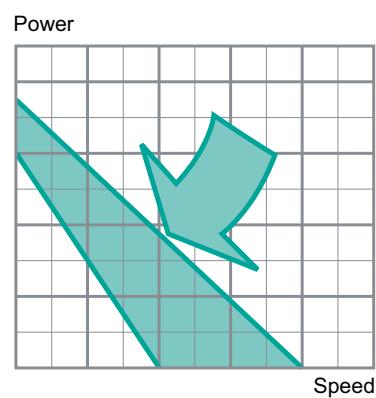

**Speed is controlled by restricting the air flow to the motor.**  
The flow regulator should feature a combined non-return valve.

Supply throttling,  
non-reversible motor

Supply throttling,  
reversible motor

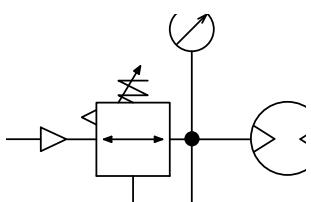

Exhaust throttling,  
reversible motor

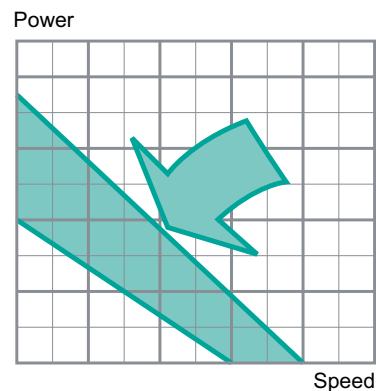

### Regulation of the air motor performance

Air pressure is used to control torque  
Control should be via a regulator, filter, lubricator.

**Torque is controlled by regulating the pressure of the motor air supply.**

Pressure regulation  
at motor inlet

# Selecting your Air Motor

## General rules

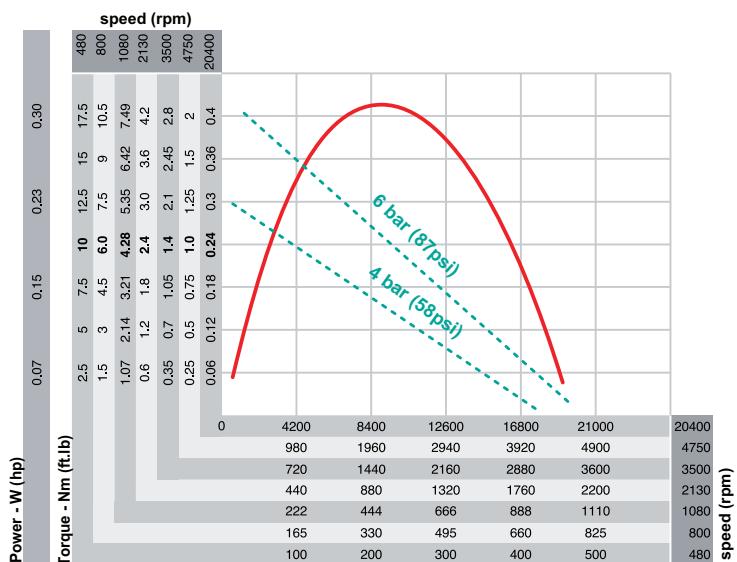

After first determining whether a single direction or a reversible motor is required, the next step is to consider the required output speed and torque together with the operational conditions.

As a general rule try to select a motor with twice the free speed of the speed required under load. By using the performance graphs indicated on the following pages it is then possible to ensure that the motor meets the requirements specified.

### Example:

**What motor is required to produce an output torque of 6 Nm at 200 rpm.**

The motor should be reversible and 6.3 bar supply pressure is available.

### • Step One

#### Select the motor type at maximum power

The maximum torque of the M25 Series motor is 10.8 Nm (7.4 ft-lb). Since a reversible motor is required the MR25 will be used.

### • Step Two

#### Select the appropriate motor speed

As a rule try to select a motor with twice the free running speed of the speed required since this will usually coincide with the high power band of the motor. For this example we require 200 rpm so use a motor of about 400 rpm free running speed. The closest is 450 rpm so try the MR25-450-KL.

### • Step Three

#### Confirm the motor is suitable for the application

By plotting both the torque (6 Nm - 4.4 ft-lb) and speed (200 rpm) on the graph an intersection is found. Provided the intersection is below the torque line for the motor (straight line) then the motor is suitable for the application.

# Accessories

Good air quality is the key to getting the best of your air motor. It is therefore recommended that a regulator filter and lubricator is fitted to the air supply and that the air flow is suitably regulated.

## M16-..../ M25-..../M39-..../ M84

### OPTIONAL ACCESSORIES

ITEM	M16	M25	M39	M84/M180
1 Silencer - sinter bronze (Noise clamp 15 dB(A) - Power loss 10)	205 054 1743	205 054 1753	205 054 1753	205 054 1763
2 Silencer (Noise clamp 20 dB(A) - Power loss 10)	205 054 1773	205 054 1773	205 054 1773	205 054 1773
3 Silencer (Noise clamp 25 dB(A) - Power loss 7)	205 054 1783	205 054 1783	205 054 1783	205 054 1783

The silencer 3 has a 1/2" threaded. They need to be connected to the motor via a tube or hose with suitable connections.

The silencer 2 has a 3/8" threaded port. M16, M25 and M39 need to be connected to the motor via a tube or hose with suitable connections.

(Part No. 2050484013) or visit [www.desouttertools.com](http://www.desouttertools.com)

## Installation and incorporation

- **Good air quality is the key to achieving the best Air Motor efficiency**, in terms of Power, Torque, Speed and life time performance, it is recommended to have air with which is supplied **must be filtered and regulated, and advisable to use Filter, Regulator, Lubricator, air flow regulator**.
- Always use the recommended air hose bore for air feed and exhaust hoses
- It is advisable that the diameter of the exhaust hose is greater than the air supply hose.
- **Check that the couplings don't reduce the air flow.**
- Minimum air network pressure: **7 bar (101 psi)** and regulator pressure setting: **6.3 bar (91.4 psi)**
- Pipe length between air treatment unit and valve: **max. 1.5 m (4.9 ft)**
- Pipe length between valve and air motor: **max. 3 m (9.8 ft)**
