Auto Switch Hysteresis/Contact Protection Box

Contact Protection Box/CD-P11, CD-P12

①

The following auto switches are not incorporated with the contact protection box.

D-A7/A8, D-A7□H/A80H, D-A73C, A80C, D-C7/C8, D-C73C/C80C, D-E7□A, E80A, D-Z7/Z8, D-9/9□A, D-A9/A9□V, and D-A79W type

Use an auto switch with a contact protection box in any case listed below. Unless using a contact protection box, the contact life may be shortened.

(Due to permanent energizing conditions.)

D-A72(H) must be used with the contact protection box regardless of load styles and lead wire length.

- ① Operating load is an inductive load.
- ② The wiring length to load is more than 5m.
- ③ The load voltage is 100 or 200 V AC.

②

Contact SMC when using built-in contact protection circuit style (D-A34[A] [C], D-A44[A] [C], D-A54/A64, D-B54/B64, D-A59W, D-B59W) in the following conditions:

- ① The wiring length to load is more than 30m.
- ② When using PLC with large flow current

Contact Protection Box/Specifications

Contact Protection Box/Dimensions

Auto Switch Hysteresis

The distance between the turn-on point (ON) of the switch by moving of the piston to the turn-off point (OFF) is called "Hysteresis". This hysteresis is included as part of the operating range (one side).

Contact Protection Box/Connection Method

For connection of the switch body and the contact protection box, connect the lead wire in the side indicated as "SWITCH" on the contact protection box to the lead wire from the switch body. The length of lead wire between the switch body and the contact protection box should be within 1m and they should be set as close together as possible.

Auto Switch Connection Method/Connection Example

Basic Wiring

•Solid state switch 3 wire NPN

3 wire PNP

2 wire

•Reed switch 2 wire

Typical PLC (Programmable Logic Controller) Connection Circuits

•Sink input 3 wire NPN

2 wire

•Source input 3 wire PNP

2 wire

Connect according to the input specification of PLC because the connection method varies with the input specification of PLC.

AND (Serial), OR (Parallel) Connection Examples

•3 wire

NPN/AND connection (with relay)

NPN/AND connection (with switch)

NPN/OR connection

Indication lights up when both switches are ON.

•2 wire (2 pcs.) AND connection

Load voltage at ON=Supply voltage-Internal drop voltage X 2 pcs.
=24V-4V X 2 pcs.
=16V

Example) Supply voltage 24V DC, switch internal drop voltage 4V

OR connection

Load voltage at OFF=Leakage current X 2 pcs. X Load impedance
=1mA X 2 pcs. X 3kΩ
=6V

Example) Load impedance 3kΩ, switch leakage current 1mA

[Solid state switch]

When 2 switches are connected by OR, load voltage will increase at OFF and these connections may cause malfunction.

[Reed switch]

There is no current leakage so that load voltage does not increase at OFF.

The flowing current is broken up into the ON-state switches, so indicator light becomes dark or may not turn ON due to the lack of the current.

⚠ Caution

Precautions

- ① Use cable whose O. D. is within the size in the figure to maintain water resistant performance.
- ② After wiring, confirm that tightening gland and all screws are tightened.

Solid State Switches: Direct Mounting Type D-M9N(V), D-M9P(V), D-M9B(V) (C €)

Grommet

- 2-wire load current is reduced (2.5 to 40 mA).
- Lead-free
- Use of lead wire compliant with UL standards (style 2844)
- 1.5 times the flexibility compared with conventional products (comparison with other SMC products)

Caution

Operating Precautions

When the cable sheath is stripped, confirm the stripping direction.
The insulator may be split or damaged depending on the direction.

Timer Operation

Detection of immediate positioning for high-speed cylinder

Detecting point dispersion occurs due to response time of PLC (sequencer); e. g. scanning.

Ex.) Cylinder speed - 1000 mm/sec.

Sequencer response time - 0.1 sec.

Detecting point dispersion - Within
100mm (= 1000mm/sec. X 0.1 sec.)

Take PLC response time into consideration when using.

Plug-in Connector Assembly/How to Use DIN Terminal

Plug-in Connector Assembly

D-A73C, D-A80C, D-J79C

D-C73C, D-C80C, D-H7C

With the convex port of the connector, insert the connector into the auto switch into the sleeve. Screw the locking ring onto the switch. (Do not tighten with pliers.)

How to Use DIN Terminal/D-A44/A44A/A44C

Connection

- ① Loosen the set screw and pull out the connector from the pin plug.
- ② Be sure to remove the set screw first and then insert a screw driver into a recessed groove under the terminal block to separate the terminal cover from the terminal block.
- ③ Follow the procedures and connect wires securely to specified terminals.
- ④ In standard cases, crimp-style terminals are used to connect wires. Please select proper crimp-style terminals so that the wire can be properly connected to terminal fittings.

Method of connection

AC: Connect to terminal No.1 and No.2

DC: Connect (+) to No.1 terminal and (-) to No.2 terminal.

How to change position of electrical entry

After separating the terminal block from the terminal cover, change the position of the terminal cover to any desired direction (4 directions at every 90°) to change the position of electrical entry.

Caution

When taking in or out the connector pin to or from the pin plug, hold the connector as perpendicular as possible.

Applicable cable (heavy insulation cable)

Applicable to cable O. D. of $\phi 6.8$ to $\phi 11.5$.

Applicable crimp-style terminal

1.25Y-3L, 1.25-3.5S, 1.25-4M

How to mount and move the auto switch

- ① Put a mounting band on the cylinder tube and set it at the auto switch mounting position.
- ② Put the mounting section of the auto switch between the band mounting holes, then adjust the position of mounting holes of switch to those of mounting band.
- ③ Lightly thread the auto switch mounting screw through the mounting hole into the thread part of band fitting.
- ④ After setting the whole body to the detecting position by sliding, tighten the mounting screw to secure the auto switch. (The tightening torque of M4 screw should be about 1 to 1.2Nm.)
- ⑤ Modification of the detection position should be made in the condition of ③.

Solid state switch D-F9N(V)/F9P(V)/F9B(V)/F9NW(V)/F9PW(V)/F9BW(V)/F9BAL

How to mount and move the auto switch

Use a watchmaker driver whose grip dia. is 5 to 6mm when tightening the auto switch mounting screw. The tightening torque should be about 0.1 to 0.2Nm.

<Applicable auto switch>

Reed switch D-E73A/E76A/E80A

Solid state switch D-M5N/M5P/M5B
D-M5NW/M5PW/M5BW
D-M5NTL/M5PTL

How to mount and move the auto switch

- ① Insert the auto switch mounting nut into the auto switch mounting groove and then set the switch at the mounting position by sliding.
- ② Put the convex part of auto switch into the mounting groove and slide it over the nut.
- ③ Push the auto switch mounting screw lightly into the mounting nut through the mounting hole.
- ④ After reconfirming detecting position, tighten the mounting screw to secure the auto switch. (Tightening torque of M2.5 screw should be 0.1 to 0.2Nm.)

How to mount and move the auto switch

Note) Use a watchmaker driver whose grip dia. is 5 to 6mm when tightening the auto switch mounting screw. The tightening torque should be about 0.05 to 0.1Nm. Tighten 90° more after you find the screw tightened.

- ① Insert the auto switch into the mounting groove and set it at the auto switch mounting position.
- ② After confirming the detecting position, tighten the mounting screw to secure the auto switch.
- ③ Modification of the detecting position should be made in step ①.

Mounting Bracket Direct mounting

<Applicable auto switch>

Solid state switch D-P5DWL

How to mount and move the auto switch

- ① Mount the mounting bracket onto the mounting nut by tightening bracket fixing screw lightly through the mounting hole on the top of bracket.
- ② Insert the mounting bracket assembly (bracket+nut) into the mounting groove and set it at the auto switch mounting position.
- ③ Push the auto switch mounting screw lightly into the auto switch through the mounting hole to secure.
- ④ After reconfirming detection position, tighten the mounting screw to secure the auto switch. (Tightening torque should be 0.5 to 0.7Nm.)
