The bent lead is partly covered with an insulating lacquer having a breakdown voltage of at least 50 V(d.c.)

Nomogram to find style or stability

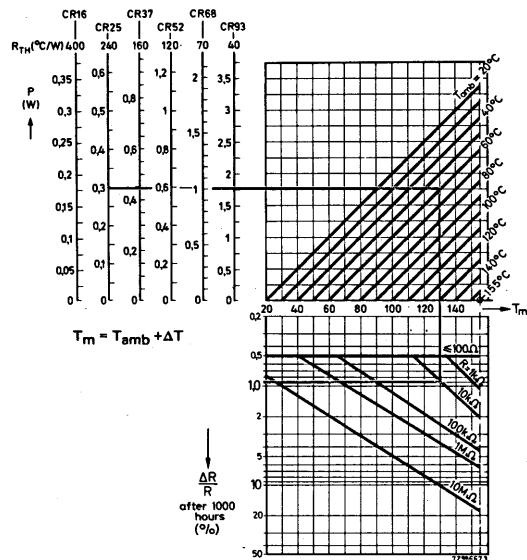

Example

What is the stability of a 10 kΩ resistor, style CR25, operating at 0.3 W in an ambient of 60 °C?

Find 0.3 W on CR25 style column.

Follow the line right, down, left, to the stability axis. ΔR/R is 1% over 1000 working hours.

Use the reverse procedure to find right style for a given stability and dissipation.
